

Please amend the specification by substituting the following paragraph in place of the first paragraph on page 3, lines 1-9:

Remotely operated plugs with wireless signal transmission have eliminated the main problem associated with the directly operated type of plug. A wireless-operated plug carries with it all power sources for operation of internal cylinders, valves, radio systems etc. by containing batteries, hydraulic oil, propellant gases and similar. By arranging an antenna on the outside of the pipe in which the plug is to be fixed, the control signals are transmitted from the control system to the plug. Examples of this are discussed in GB 2235745, US 4,465,104 and US 4,854,384.
